

Environmental Policy

SES Water Management recognises that protection of the environment is an integral part of our business. We passionately believe in environmental excellence on all our sites and within our offices. We endeavour to undertake works in an environmentally responsible manner. All persons working for and on behalf of SES have a responsibility to comply with the requirements of this Environmental Policy.

Our core principle:

Our objective is to minimise the adverse impact our operations have on the environment by implementing our Environmental Management System (EMS) on all our sites. We are fully committed to managing and operating our sites to the highest possible standards and to protect the environment to the best of our ability.

Management:

We have established an Environmental Management System (EMS) based upon the external & internal influences, context of the organisation, needs and expectations of our interested parties and the requirements of ISO 14001:2015 to ensure we meet the following objectives:

- Establish systems and procedures to facilitate continual improvement of our EMS and to evaluate all potential environmental impacts and aspects, opportunities and risks.
- Ensure compliance with relevant current environmental compliance obligations and regulatory requirements, customer requirements and to establish self-monitoring to ensure compliance.
- Regularly set targets and objectives and review performance.
- Manage our operations with due diligence, using technically sound and economically feasible best practice procedures and processes in order to protect the environment and prevent pollution.
- Communicate our Environmental Policy to all persons working for/or on our behalf and to develop environmental practices / procedures to address changing operating circumstances.
- Provide necessary resources and training to employees so that they understand our environmental responsibilities.

The management team; in line with the strategic direction of the business give their full support to this Environmental Policy and ensure it is communicated, implemented and regularly reviewed. This policy is agreed by senior management and available to Interested Parties.
